

Approved for use with Critical Fall Height of up to 1,5 m

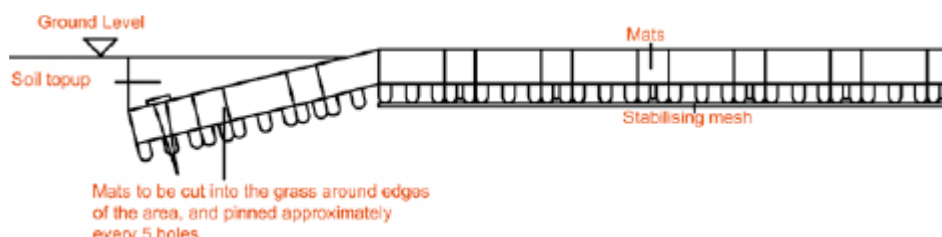

Main characteristics:

- Allows natural grass to grow through the rubber tiles, giving a more natural appearance to a site.
- Can be used as an anti-erosion solution in high wear areas, such as mounds and cableways.
- Is a cheaper safety surfacing option which is useful at any site that might not require a shock absorbing surface.
- Causes minimal disturbance to the site. Grass mats can be an effective surface in areas where there may be tree roots as there is no need for excavation.
- It is essential that site conditions are suitable for grass mating, preferably flat well maintained grass, otherwise levelling and turfing is necessary.
- Single layer coverage as a cost effective solution.
- Slip resistance and easy to maintain.

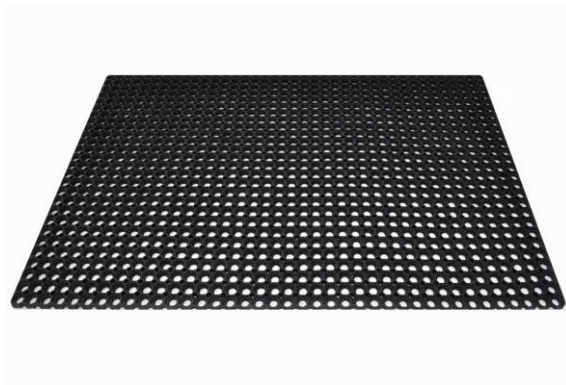

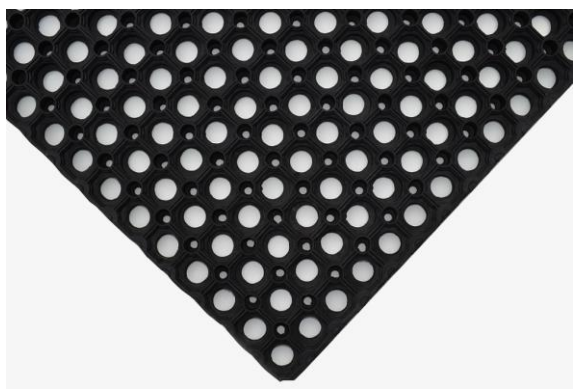

Mesh option:

- A Stabilizing mesh may be installed below the grass mat.

See images of mats and plugs for fixing to the ground.

How to order:

The different items in the system can be purchased separately:

- SUR14101-150 Grass Mat 1000 x 1500 x 22 mm
- SUR14101-000 Plug for Grass Mats
- SUR14101-001 Cable tie for grass mats, dim 3,5 x 200 mm

Or as a kit:

-SUR14801-150 Kit consisting of:

- 1 pcs SUR14101-150
- 6 pcs SUR14101-000
- 8 pcs SUR14101-001

To arrange installation by a local installer the resource codes are:

- SUR14701-000 Installation only of grass mat
- SUR14801-150 Grass Mat including installation
